I'm pleased to confirm that I have successfully installed all the required software and dependencies for the Externship program. Anaconda Navigator is up and running, providing a convenient interface for managing my Python environment. Jupyter Notebook launches seamlessly, and I can access it either through the Navigator or the terminal. Spyder, the integrated development environment, opens without any issues, offering a robust platform for coding and experimentation. Additionally, I have verified the installation of the necessary dependencies by executing a simple script, confirming the presence and compatibility of Keras, TensorFlow, and OpenCV, all with their latest versions
